**Industry Leading Business Model Generator Unveiled and Online at:
www.NobleOak.com**

Ottawa, Canada /September 14, 2004 – The Business Model Generator Research Group from the Sprott School of Business and Faculty of Engineering and Design at Carleton University in Ottawa, Canada have today unveiled the development of a Business Model Generator (BMG) to the general public and business communities.

This easy-to-use, free service has been launched on **NobleOak.com**, which provides business information and services for entrepreneurs. The BMG uniquely constructs a one page diagrammatical analysis of a business, visually demonstrating how products and services are transformed in a value-added process by the business. It details the flow of money through the company and its ecology and measures the viability of its marketing dimension.

*The BMG Research
Group, Carleton
University, Ottawa,
Canada*

“One thing we have learned is that if you need heroic measures to find and keep your first customer, your second customer... your *nth* customer, your business is probably not viable,” says Project Leader Mike Kelland. “The BMG can help startups by focusing them on not only getting their marketing right by using low cost, *guerrilla marketing* techniques but also learning how to use *bootstrap capital*, discovering what their ‘*pixie dust*’ is (i.e., what makes their business models really rev) and, finally, we give them a Business Model Score, which allows them to numerically compare their businesses with others that are household names.”

Business models are essential building blocks for both new *and* established enterprises. In a rapidly changing economy, there is an ever increasing need for businesses as well as other types of organizations to have the discipline required to continually update and revisit their business models to maintain a competitive edge.

-more-

Dr. Bruce Firestone, Founder of the Ottawa Senators and an Adjunct Research Professor at Carleton University in Ottawa provided guidance for the BMG Research Group.

“Entrepreneurship is one of the keys to pulling people out of poverty everywhere around the planet. It is a force for effective, sustainable use of the planet's resources and gives people more control over their working lives,” said Firestone. “What we have done is give these entrepreneurs, wherever they are, a free tool to help them build their new enterprises. We want them to use scarce resources wisely and efficiently so that they are building businesses where, the harder they work, the more money they will generate together with more jobs, more wealth and more social benefits for all.”

NobleOak.com has served as an ultimate start-up guide for businesses, professionals and students since 2002.
